

Table 4. *Distinguishing features between NMS and SS.*

	Serotonin syndrome (SS)	Neuroleptic Malignant syndrome (NMS)
Onset	Within 24 h	Days to weeks
Neuromuscular findings	Hyperreactivity (tremor, clonus)	Bradyreflexia, severe muscular rigidity
Causative agents	Serotonin agonists	Dopamine antagonists
Treatment agents	Benzodiazepines, cyproheptadine	Bromocriptine, dantrolene
Resolution	Within 24 h	Days to weeks
