

**Table 3.** *Endoscopic classification of corrosive injuries and Prognosis.*

Grade	Appearance	Prognosis
0	Normal	Complete recovery
1	Edema and hyperaemia of mucosa	Complete recovery
2a	Superficial localised ulcerations, friability, blisters	Low probability of stricture formation
2b	Circumferential, deep ulcers	High risk of stricture, low risk of perforation
3a	Multiple ulceration with scattered areas of necrosis	High risk of stricture, medium risk of perforation
3b	Extensive necrosis	High risk of strictures and perforation
4	Perforation	High mortality and morbidity
